

Thread

Task 02

```
public class RunnableTask implements Runnable{

    @Override

    public void run() {

        System.out.println(Thread.currentThread().getId()+ "is executing the runnable task.");

    }

}

public static void main(String[] args) {

    RunnableTask task1 = new RunnableTask();

    RunnableTask task2 = new RunnableTask();

    Thread thread1 = new Thread(task1);

    Thread thread2 = new Thread(task2);

    thread1.start(); // Starts thread1

    thread2.start(); // Starts thread2

}

}
```

Output
